

## We Think Alexandria Sanchez

### The Slippery Slope By Lemony Snicket Alexandria Sanchez 5<sup>th</sup>

he Baudelaires are back; to bad Count Olaf is too!

They were disguised as circus freaks so they could go with Count Olaf to see if one of their parents was alive. Their plan backfired.

Madame Lulu told Count Olaf about their disguise. Sunny was captured while Klaus and Violet were left rolling down a mountain! But luckily, thanks to Violet's great inventing skills, they created a break before they could plummet to their doom.

On their (Violet and Klaus) journey to find V.F.D. to find out if one of their parents are alive they meet someone they never though they'd meet!

Find out whom it is they meet

and more by reading Lemony Snicket's "The Slippery Slope." Do the Baudelaires slip through Olaf's clutches this time?

### Got Facts Jade Gore 5<sup>th</sup>

### Ermine Jade Gore 5<sup>th</sup>

Ermines hide under woodpiles, in mouse tunnels and around old barns and buildings waiting for their prey. Their favorite meals are mice, hamsters, moles and other small rodents. They sometimes eat birds, lizards and insects. No matter what's on the menu, ermine usually hunt at night. This is when they are more active – moving in quick spurts, ducking behind stumps, crawling in out and out of crevices, stopping to check for food or potential danger. Their coats change color to the season.

Ermine fur was once prized for trimming royal robes or other items clothing and they still do today. Soon there won't be any left.

### Sharks Dental Plan Monica Maldonado 4<sup>th</sup>

**If you look at your teeth they are not as quite the same as sharks' teeth.** Different kinds of sharks have different kinds of teeth. Sharks' teeth are so unique that scientists can tell what kind of shark it is when they see a bite that a shark has left behind. Sharks have a supply of teeth and rows and rows of teeth. An adult shark goes through 7to12 sets of teeth in a year. When a shark looses a tooth a new one is there to take its place. A shark called a cookiecutter, can swallow a whole set of teeth when it is eating something else like some kind of food.

So never try to guess whether a shark has teeth. Yes! believe the experts. Sharks always have

teeth.
